

Principles of Wound Management Tissue Viability Study Day

Who should attend?

- New information for newly qualified staff
- It provides a CPD update for existing staff with new best practice and the new formulary products

What does the day include?

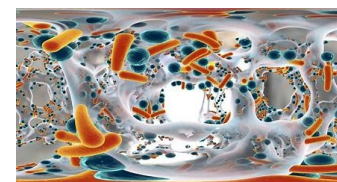

- Overview of the new East Region Formulary dressing products
- Basic overview of wound healing
- Delaying factors and how to optimise your patient to achieve wound healing
- How to reduce healing times through consistent assessment and care
- How to assess a wound using the TIMES model
- What is Biofilm and how can we disrupt it
- Why we need to cleanse wounds
- Debridement options: Autolytic, mechanical, larvae and when to refer for sharp debridement
- Dressing selection based on your wound assessment
- An overview of negative pressure devices and when to use them
